

HTTPS

Para que nuestro servidor web pueda trabajar con SSL lo debemos habilitar:

a2enmod ssl

Se crea la siguiente carpeta (default-ss.conf)

```
root@servicios-VB:/home/servicios# ls /etc/apache2/sites-available
000-default.conf compufacil.conf default-ssl.conf vetfiru.conf
root@servicios-VB:/home/servicios#
```

Configuramos el archivo .conf de ambas páginas Web.
